Hi guys,

In this project we will control a DC motor with a smartphone via bluetooth. This project is great to learn more about:

- DC motor
- Interfacing Arduino with your smartphone
- Bluetooth module
- L293D

you can visit my website for more electronic projects, interesting news and tips. (http://randomnerdtutorials.com)

Check this video to see it working

1x Arduino Uno

1x Bluetooth Module (for example: HC-05)

1x Smartphone (any Android will work)

BlueTerm application

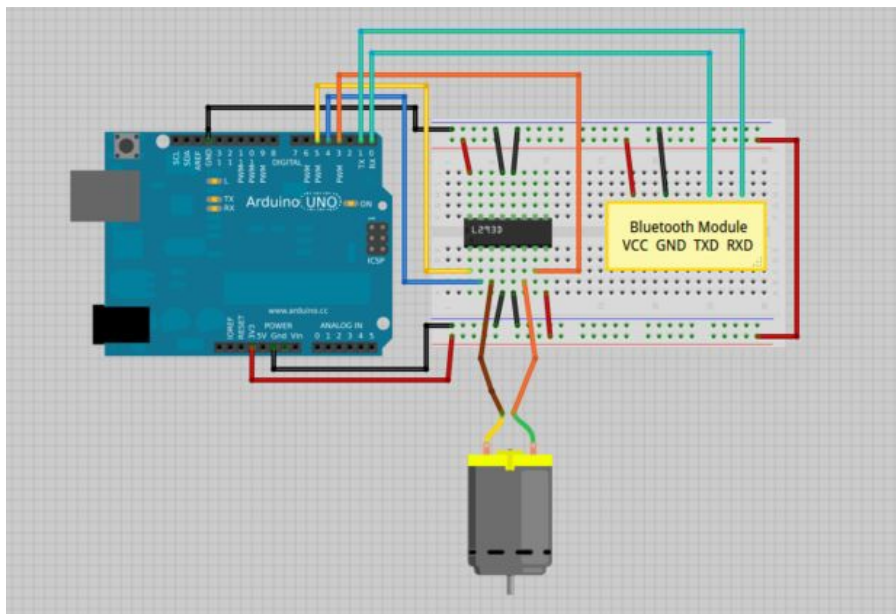

1x L293D IC

1x DC motor

1x Breadboard

Jumper Cables

Step 2: Schematics and common mistakes

(<http://cdn.instructables.com/FLG/UVFV/HD4VGYKU/FLGUVFVHD4VGYKU.LARGE.jpg>)

TWO COMMON MISTAKES:

-You need to remove the RX and TX cables when you're uploading the sketch to your Arduino.

-Sometimes people connect the TX from the bluetooth module to the TX of the Arduino... that's wrong and it won't work. Make sure you connect it properly, the TX into RX and the RX into the TX.

Note:

If the HC-05 Bluetooth Module asks for a password, It's '1234'.

Step 3: Arduino Code

(<http://cdn.instructables.com/FD0/5ZHI/HD4VNDM9/FD05ZHIHD4VNDM9.LARGE.jpg>)

For the android communication with our bluetooth module I've used the BlueTerm app, It's completely free, so you just need to go to "Play store" and download it. Then you just need to connect your smarthphone with the bluetooth module. Remember to remove the TX and RX cables. (you can see in youtube video below how that's done).

Step 4: Final Product

(<http://cdn.instructables.com/FD0/5ZH/HD4VNDM9/FD05ZHIHD4VNDM9.LARGE.jpg>)

I've only set 3 commands to control the DC motor.

- '0' – Turns off the DC motor
- '1' – DC motor rotates to right
- '2' – DC motor rotates to left

Check this video to see the circuit in action!

you can visit my website for more electronic projects, interesting news and tips:

can i use L293NE IC than L293D IC?

**kag432 (/member/kag432/)**

hustlervanz

4 months ago

[Reply \(C6V79JGHTVMQBXB\)](#)

(/member/kag432/)

The NE is just the package so the NE is a L293NE and a L293DNE, but the difference is that the L293DNE has flyback diodes built in while the L293NE does not and they need to be added externally as on page 2 of the datasheet:

Hi!

Thanks for the code and all the instructions! Good sharing.

I have a problem as the bluetooth module I am using is a different one, in my case it is LCBTCY6, but unfortunately it is not working. Do you have any clue about why might it be? Through the serial monitor works perfectly.

Thanks in advance!

RuiSantos (/member/RuiSantos/) (author) áde marcos serrano

Reply (CETWAE2HQC1L47F)

(/member/RuiSantos/)

Thanks Áde.

If it's working via serial monitor means your circuit is correct!

About your bluetooth module... I'm not sure how it works...as I've never used one. Try to take a look at both datasheets.

See If my bluetooth works like yours.. as I don't have the time do that myself.

Your module might need some kind of configuration before you use it. because I'm sure both modules can communicate via serial port with the Arduino.

Hey brother ...The Blue term app is not available on play store //....
Can anyone plz suggest any other app to control bluetooth

RuiSantos (/member/RuiSantos/) (author) prana3

9 months ago

Reply (C2TAJGYHN82K6C4)

(/member/RuiSantos/)

I didn't knew... Instead of
using blueterm, please
take a look at my new
tutorial here:
<http://randomnerdtutorials.com/control-2-dc-motors-via-bluetooth/>

I've developed this app
with Mit App inventor...
so you can control your
arduino via bluetooth.
Take a look it's much
better then blueterm and
it looks nicer.

I hope this helps, leave
a comment on my
website if you have any
questions.
All the best,
Rui Santos

hey i just used bluetooth hc 05 and followed the same schematics but it didnt work

RuiSantos (/member/RuiSantos/) (author) shivamundisputed

11 months ago

[Reply \(CGI275KHKZ9LO6Y\)](#)

(/member/RuiSantos/)

I'm sure my project is working 100%...
because more than 50 people messaged me saying it was working...
Please make sure you check the most common mistakes...
see if you're TX is connect to RX and the RX is connected to the

TX
Check if you're IC is on
the correct way.
If it's still not working.
before even connect
the bluetooth module
check if your circuit is
working by sending
those numbers '0' '1'
and '2' through the
serial monitor... if it's
working like that it might
be a problem with your
bluetooth module

good luck!
thanks so much for
trying my project let me
know if you have more
questions.
the best way to contact
me is by leaving a
comment on my
website.

[Reply \(CBXHWIHBHH5Y9V\)](#)

Can u plzz tell me what is its range I want to make a car using your idea
any suggestions plzz

(/member/us241098/)

RuiSantos (/member/RuiSantos/) (author) us241098

1 year ago

[Reply \(CVTLN3RHHJOKP2H\)](#)

(/member/RuiSantos/)

The range is about 5-6
meters with these bluetooth
module, I already reached
10 meters and It worked
just fine, but sometimes
with more than 6 meters
you will get disconnected.
If you want more range, I
recommend you to buy a
better bluetooth module I
guess
Good luck with your projec I
look forward to hear more
about that :)

vek11 (/member/vek11/) RuiSantos 11 months ago

What are your recommendations for a "better" bluetooth module?

makiemo (/member/makiemo/)

1 year ago

[Reply \(CWYA02YHIPQVK6\)](#)

hei there.. can i just connect the arduino with my smart phone without using
the blue term?? thanks alot

(/member/makiemo/)

RuiSantos (/member/RuiSantos/) (author) makiemo

1 year ago

[Reply \(CR8XIWPPIXIC8T\)](#)

(/member/RuiSantos/)

yes you can connect but
then you can't do anything...
because the Bluetooth itself
of your smartphone can't

send any information for your arduino. you need an app for that. That's why I'm using blueterm

supsuppl88 (/member/supsuppl88/)

1 year ago

[Reply \(C8CLM6GH3TYZPW\)](#)

hii

(/member/supsuppl88/) can you tell me the sketch required to set JY-mcu to pairable mode and after i connect it to my smart phone the arduino read what i send in blueterm

RuiSantos (/member/RuiSantos/) (author) supsuppl88

1 year ago

[Reply \(CGGCCLFHIF073B7\)](#)

Actually i don't know exactly how's the skecth, because mine didn't needed... :S
